Definition of Dignity and Reflection on how the emergency response or rehabilitation occurred in the Chernobyl disaster, was in favor or to the detriment of the populations dignity.

- *Dignity* refers to the quality of knowing you are worthy of being respected and respecting yourself. (Dignity. (n.d.). Retrieved November 21, 2017, from <http://www.dictionary.com/browse/dignity>)
- I think that the Chernobyl's disaster emergency response was not in favor to the population's dignity because they should've evacuated as soon as the disaster happened to protect the population's health, but instead they tried to postpone it, thus going against people's dignity.
