infant classes

Skills development

Skills

- Applying and problem-solving
 - Communicating and expressing
 - Integrating and connecting
 - Reasoning
 - Implementing
 - Understanding and recalling
-

Strands

Strand units

Early mathematical activities

- Classifying
 - Matching
 - Comparing
 - Ordering
-

Number

- Counting
 - Comparing and ordering
 - Analysis of number
 - Combining*
 - Partitioning*
 - Numeration*
-

Algebra

- Extending patterns
-

Shape and space

- Spatial awareness
 - 3-D shapes
 - 2-D shapes
-

Measures

- Length
 - Weight
 - Capacity
 - Time
 - Money
-

Data

- Recognising and interpreting data

Skills development for fifth and sixth classes

Through completing the strand units of the mathematics curriculum the child should be enabled to

Applying and problem-solving

- select appropriate materials, concepts and processes for particular tasks and applications
- apply concepts and processes in a variety of contexts
- analyse problems and plan an approach to solving them
- select and apply a variety of strategies to complete tasks and projects or solve problems
- reflect upon and evaluate solutions to problems

Communicating and expressing

- discuss and explain the processes used and the results of mathematical activities, problems and projects in an organised way
- listen to and discuss other children's mathematical descriptions and explanations
- discuss and record the processes and results of work using a variety of methods
- discuss problems and carry out analyses

Integrating and connecting

- connect informally acquired mathematical ideas and processes with formal mathematical ideas and processes
- recognise mathematics in the environment
- represent mathematical ideas and processes in different modes: verbal, pictorial, diagrammatic and symbolic
- understand the connections between mathematical procedures and the concepts he/she uses
- recognise and apply mathematical ideas and processes in other areas of the curriculum

Strand: Number

Content for fifth class

Content for sixth class

Strand unit

Place value

The child should be enabled to

- read, write and order whole numbers and decimals
extend previous conceptual and practical work to include larger numbers and decimals
- identify place value in whole numbers and decimals
extend previous conceptual and practical work to include larger numbers and decimals
- round whole numbers and round decimals
*round whole numbers to nearest ten, hundred, thousand
round decimals to nearest whole number.*

The child should be enabled to

- read, write and order whole numbers and decimals
- identify place value in whole numbers and decimals
- round decimals
round decimals to one, two or three decimal places.

Strand unit

Operations

The child should be enabled to

- estimate sums, differences, products and quotients of whole numbers
*use strategies for estimation, e.g. front-end estimation, rounding, clustering, special numbers
estimate calculations and compute answers with a calculator
e.g. $450 \times 9 = 4500$ (estimation based on 450×10)
estimate first, then use calculator to get actual result*
- add and subtract whole numbers and decimals (to three decimal places) without and with a calculator
develop and extend the use of existing algorithms

The child should be enabled to

- estimate sums, differences, products and quotients of decimals
*use strategies for estimation
estimate calculations and compute answers with a calculator*
- add and subtract whole numbers and decimals (to three decimal places) without and with a calculator

- multiply a decimal (up to three places) by a whole number, without and with a calculator

develop and extend the use of existing algorithms
 8.125×9

- divide a three-digit number by a two-digit number, without and with a calculator

explore the concept of division with concrete materials
develop the long division algorithm from repeated subtraction and multiples of repeated subtraction

- divide a decimal number by a whole number, without and with a calculator

explore the concept of division of decimals with concrete materials, money and measurement
extend the algorithm in conjunction with place value
 $75.6 \div 4.$

- multiply a decimal by a decimal, without and with a calculator

develop and extend the use of existing algorithms
 7.25×1.5 ; 13.2×0.75

understand that multiplication does not always make larger

- divide a four-digit number by a two-digit number, without and with a calculator

develop and extend the use of existing algorithms
 $7852 \div 26$

- divide a decimal number by a decimal, without and with a calculator

explore the concept of division by decimals with concrete materials, money and measurement
 $36.92 \div 2.6$; $27.6 \div 0.2$
understand that division does not always make smaller.

Strand unit

Fractions

The child should be enabled to

- compare and order fractions and identify equivalent forms of fractions with denominators 2–12

explore, compare and record simple equivalence using concrete materials, paper folding, and fraction charts

- express improper fractions as mixed numbers and vice versa and position them on the number line

establish equivalence by using concrete materials
explore, compare and record simple improper fractions and mixed numbers diagrammatically, numerically and on the number line

- add and subtract simple fractions and simple mixed numbers

use equivalent fractions to simplify calculations

The child should be enabled to

- compare and order fractions and identify equivalent forms of fractions

order equivalent fractions on the number line and on fraction charts

- express improper fractions as mixed numbers and vice versa and position them on the number line

- add and subtract simple fractions and simple mixed numbers

common denominator should be found by listing multiples

The treatment of content as suggested in the exemplars is common to both classes.

Content for fifth class

- multiply a fraction by a whole number
develop concepts with concrete materials, paper folding and fraction charts
four $\frac{3}{4}$ of a pizza is how many pizzas?
- express tenths, hundredths and thousandths in both fractional and decimal form
explore and compare using concrete materials
express as fractions and as decimals.

Content for sixth class

- multiply a fraction by a fraction
explore and develop concept by using concrete materials and the number line and by drawing diagrams to illustrate examples, leading to the development of an algorithm
- express tenths, hundredths and thousandths in both fractional and decimal form
- divide a whole number by a unit fraction
how many quarters in 2?
 $2 \div \frac{1}{4}; 15 \div \frac{1}{5}$
- understand and use simple ratios
explore and record the relationship between the natural numbers and their multiples.

The child should be enabled to

- develop an understanding of simple percentages and relate them to fractions and decimals

express percentages as fractions and as decimals, and vice versa

calculate simple percentages, e.g. 50%, 25% 10%

- compare and order fractions and decimals

explore, compare and record using concrete materials and money

order diagrammatically or on the number line

- solve problems involving operations with whole numbers, fractions, decimals and simple percentages

use diagrams; estimate and compute answers with a calculator

include simple discount and increase examples

10% off all jeans, 20% extra free.

Linkage

Measures: Money

Integration

Geography: Human environments

The child should be enabled to

- use percentages and relate them to fractions and decimals

express quantities as percentages

- compare and order percentages of numbers

- solve problems relating to profit and loss, discount, VAT, interest, increases, decreases.

Linkage

Measures: Money

Integration

Geography: Human environments

The treatment of content as suggested in the exemplars is common to both classes.

Content for fifth class

Content for sixth class

Strand unit

Number theory

The child should be enabled to

- identify simple prime and composite numbers
 - define a prime number, i.e. a number greater than 1 with exactly two divisors, itself and 1*
 - identify simple prime numbers by trial and error; e.g. 2, 5, 7, 11*
 - identify and record primes with Sieve of Eratosthenes*
 - define a composite number, i.e. a number that has more than two divisors, e.g. 4, 6, 9*
 - identify and record composite numbers using number facts and/or a calculator*
 - investigate relationship with odd and even numbers*
- identify square and rectangular numbers
 - construct diagrams on geoboards, pegboards and squared paper to illustrate simple square and rectangular numbers*
 - explore, compare and record these numbers*
- identify factors and multiples
 - identify factors and multiples from basic multiplication facts.*

The child should be enabled to

- identify simple prime and composite numbers
- identify and explore square numbers
 - $16 = 4 \times 4 = 4^2$
- explore and identify simple square roots
 - construct diagrams*
 - record and relate to square numbers*
- identify common factors and multiples
 - explore and record factors and multiples to identify common factors and multiples*
- write whole numbers in exponential form
 - $1000 = 10 \times 10 \times 10 = 10^3$
 - $8 = 2 \times 2 \times 2 = 2^3$.

Strand: Algebra

Content for fifth class

Strand unit

Directed numbers

The child should be enabled to

- identify positive and negative numbers in context
examine and discuss money affairs, video counters and calculator displays, sports reports, golf scores, temperature, sea level and lifts, leading to the need to distinguish between amounts above and below zero refer to positive and negative numbers as 'positive seven' and 'negative three'
record positive and negative numbers with + or - signs raised e.g.
 $+7$ -3
rewind a video tape
pupils draw and label a thermometer, mark in temperatures, consult weather forecasts in newspapers.

Integration

Geography: Natural environments: weather, climate and atmosphere

Content for sixth class

The child should be enabled to

- identify positive and negative numbers on the number line
walk the number line to experience positive and negative numbers that arise in discussion and/or in context identify and mark positive and negative numbers on personal and class number lines
- add simple positive and negative numbers on the number line
add simple positive and negative numbers by walking the number line and by counting on the class and personal number line
 $+5 + -7 = \square$ $-9 + -3 = \square$
 $-8 + +2 = \square$
add positive and negative numbers that arise contextually, e.g. a golfer's score over four rounds was 6 under par, 2 over par, 3 under par, and 1 under par; what was her final score relative to par?

Integration

Geography: Natural environments: weather, climate and atmosphere

The child should be enabled to

- explore and discuss simple properties and rules about brackets and priority of operation

identify, discuss and compute expressions with brackets in a variety of positions

$$10 + (4 + 7) = \square \quad (10 + 4) + 7 = \square$$

$$(8 - 1) + 4 = \square \quad 8 - (1 + 4) = \square$$

$$(3 \times 4) + 5 = \square \quad 3 \times (4 + 5) = \square$$

$$8 \div (2 + 2) = \square \quad (8 \div 2) + 2 = \square$$

what is the significance of the positions of the brackets?

identify, discuss and compute expressions with brackets excluded

$$4 + 3 \times 5 = \square \quad 12 \times 6 + 3 = \square$$

$$2.45 \div 5 - 0.75 = \square \quad 96 \div 8 - 12 = \square$$

what is the significance of starting operations at different points?

e.g. 4 + 3 before 3 × 5 or vice versa in 4 + 3 × 5

establish the value of brackets, leading to the priority of multiplication and division over addition and subtraction

explore these properties and rules without and with a calculator

- identify relationships and record verbal and simple symbolic rules for number patterns

identify and discuss rules for simple number sequences
 2.0, 3.5, 5.0, 6.5 ... i.e. sequence increases by adding 1.5

81, 27, 9 ... decreases by dividing by 3

1, 4, 9, 16, 25, 36 ...

The child should be enabled to

- know simple properties and rules about brackets and priority of operation

use the calculator in exercises to find missing numerals and missing operator

$$\text{e.g. } 37 \quad ? \quad 21 \quad ? \quad 23 = 800$$

$$27 \quad ? \quad (36 \quad ? \quad 11) = 675$$

- identify relationships and record symbolic rules for number patterns

deduce and record rules for given number patterns

2, 6, 12, 20, 30 ...

4:1, 8:2, 16:4 ...

The treatment of content as suggested in the exemplars is common to both classes.
