## What is a Line? (First Worksheet)

How many lines are there? What is a quality about both of these lines? $\qquad$

What is the name of the blue line? Green line?
Blue Line $\qquad$
Pink Line $\qquad$

Move x along the slider, what does it do? $\qquad$
$\qquad$

Move b along the slider, what does it do? What is the point on blue line that is effected by b? $\qquad$
$\qquad$

Move m along the slider, what does it do? $\qquad$
$\qquad$

## Move m so that it equals 0.4.

Move b so that it equals 4.

For the blue line $y=$ $\qquad$ .
When $x=-5$ what does $y$ equal? (put -5 in the equation and solve for $y$ )

When $x=5$ what does $y$ equal? (put 5 in the equation and solve for $y$ )

When $x=3$ what does $y$ equal? (put 3 in the equation and solve for $y$ )

For the pink line $y=$ $\qquad$ .
When $x=-4$ what does $y$ equal? (put -5 in the equation and solve for $y$ )

When $x=2$ what does $y$ equal? (put 5 in the equation and solve for $y$ )

When $x=5$ what does $y$ equal? (put 3 in the equation and solve for $y$ )

Move $\mathbf{X}$ along the slider until it equals each value listed in the following tables. Fill in the table for the blue line and for the pink line.

Blue

| X | -5 | -3 | -1 | 0 | 1 | 3 | 5 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Y |  |  |  |  |  |  |  |

Pink

| X | -5 | -3 | -1 | 0 | 1 | 3 | 5 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Y |  |  |  |  |  |  |  |

Takeaway: If you connect all of these points you get the line. A line is just a bunch of points that follow a pattern.

## Components of a Line(Second Worksheet)

Move slider m so that $\mathrm{m}=2$
Move slider c so that $\mathrm{c}=3$
$y=$ $\qquad$
Green Point ( $\qquad$ , $\qquad$ )

Move the black point on the line so that it is on the next whole point (no integers).
Black Point ( $\qquad$ , $\qquad$ )

What is the rise from the green point to the black point? What is the run from the green point to the black point?

Rise $=$ $\qquad$
Run $=$ $\qquad$

Move slider m so that $\mathrm{m}=-2$
Move slider c so that $\mathrm{c}=1$
$y=$ $\qquad$
Green Point ( $\qquad$ , $\qquad$ )

Move the black point on the line so that it is on the next whole point (no integers).
Black Point ( $\qquad$ , $\qquad$ )

What is the rise from the green point to the black point? What is the run from the green point to the black point?

$$
\begin{aligned}
& \text { Rise }= \\
& \text { Run }=
\end{aligned}
$$

Move slider m so that $\mathrm{m}=-1$
Move slider c so that $\mathrm{c}=-2$
$y=$ $\qquad$
Green Point ( $\qquad$ , $\qquad$ )

Move the black point on the line so that it is on the next whole point (no integers).
Black Point ( $\qquad$ , $\qquad$ )

What is the rise from the green point to the black point? What is the run from the green point to the black point?

$$
\begin{aligned}
& \text { Rise }= \\
& \text { Run }=
\end{aligned}
$$

Move slider m so that $\mathrm{m}=3$
Move slider $\mathbf{c}$ so that $\mathrm{c}=-1$
$y=$ $\qquad$
Green Point ( $\qquad$ , $\qquad$ )

Move the black point on the line so that it is on the next whole point (no integers).
Black Point ( $\qquad$ , $\qquad$ )

What is the rise from the green point to the black point? What is the run from the green point to the black point?

$$
\begin{aligned}
& \text { Rise }= \\
& \text { Run }=
\end{aligned}
$$

Where do you place m and c in the equation?

$$
y=\ldots \quad x+\ldots
$$

What does m do to the line? $\qquad$
$\qquad$

What does c do to the line?

## Create a Line(Last Worksheet)

Using what you learned above create the line shown using A and B. Hit New Line. Repeat(6x).
